

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter consists of conclusions and suggestions. After completing this research, this study provides several conclusions and research suggestions.

5.1 Conclusions

Based on data presentation and data analysis from the previous chapter, the researcher draws conclusions as follow:

5.1.1 Students' Perception on using Microsoft Teams in online teaching during Covid-19 Pandemic.

The first perception is the positive perception of students about learning English using Microsoft Teams Meeting during the Covid-19 pandemic, some of them stated that learning English while at home is quite good. They argue that this method is arguably quite effective because it is the only way out to keep learning online as long as the Covid-19 pandemic is still taking place in Indonesia, so they can still learn even if not directly in school. Learning English using Microsoft Teams Meeting during the Covid-19 pandemic has many advantages, such as students can be more independent to learn so that they do not depend on the teacher, time and place to learn can also be flexible anytime and anywhere, but in this context they must remain at home because of the regulations of government during the pandemic.

In addition, the second perception is negative perception. Students said that learning English using Microsoft Teams Meeting during the Covid-19 pandemic, was quite difficult, as the material delivered by the teacher was not well received, and the lack of questions and answers interactions during online learning in students not understanding. In addition, the ineffectiveness of this learning system also makes some students lazy to learn and on another side, there are some problem that students must do other activity during the class.

5.1.2 Students' difficulties found in using Microsoft Teams in online teaching during Covid-19 Pandemic.

Many of the students have their own difficulty in virtual meeting using Microsoft Teams Meeting in online class , some of them have trouble with the signal that they used nearly all of them get trouble with their signal, the data that collected from the interview a few of them are comparative but they have another choice with this trouble, they can go to another place to get a superior signal or they can use the flag of wi-fi to create all of becoming better. And in analyst perception appear that nearly there's one or more member in the meeting are reconnecting to the meeting in conclusion that nearly all of them get trouble with their signal.

The researcher found so many difficulties that students face in virtual meeting using Microsoft Teams Meeting in online class , first difficulties in general is about their device, almost all of them face the same problem , in the beginning of the class the students start to find the problem of it , but sometime they can solve it by themselves, but not all of them. Here some of other friends try to help each other , start from they give information about friends' trouble in virtual meeting or just give any suggestion. Not only that problem but also about their schedule in their own activity sometime they come late join to the virtual meeting using Microsoft Teams Meeting because of they have other activity that they must be done first.

5.2 Suggestion.

After concluding the research, the researcher would like to give some suggestions that can be considered as follow:

5.2.1 For student

Based on the results of the author's research, it can be said that the use of Microsoft Teams is appropriate to be used as a learning platform in online classes. With the data that has been presented by the author, it will be an indicator for other students so that the use of Microsoft Teams is an option that can be used.

5.2.2 For teacher and lecture

Based on the results of the author's research, the use of Microsoft Teams will be very useful in terms of classroom teaching. With the features provided, it is

quite easy to understand and will be easily accepted by even elderly teachers. With the Microsoft Teams platform, it is hoped that it will be used more in future learning.

5.2.3 For university

This research will be a benchmark for how far the development of using the Microsoft Teams application, and can determine what platforms are most effectively used in lectures during a pandemic. With the Microsoft Teams platform, it is hoped that it will be used more in future learning

5.2.4 For government

This research will affect the mindset of the people who in fact are still lagging behind from neighboring countries. Based on the results of the author's research, it can be concluded that Microsoft Teams is appropriate to be used as a learning platform during a pandemic. In the future, it is expected to pay more attention to the number of applications used for learning.
