CHAPTER V
CONCLUSION AND SUGGESTION

5.1 Conclusion

This research is a mix method research, where in this research there are two research. The two research was conducted are quantitative research and qualitative research. Quantitative research is conducted by analyzing data on the improvement of students'vocabualary mastery. And qualitative research is done y collecting information with observations sheets and conducting interview with teacher and students. Based on the stage of the research, the following conclusion can be draw:

1. The researcher concluded that the use of wordwall medi can improve student vocabulary mastery as seen from the acquisition of significant score from the results of the average pre-test and post-test score of the experimental class 53.96 to 76.17 and the use of wordwall media can eliminate laziness senn from the result of the t-test which shows the significance (2-tailed) of 0.000 where 0.000 < 0.05 which shows that there is a significanct influence between the mastery of student vocabulary using wordwall media and those using conventional method.

2. As the result of interview and observation to the answer the second research questions. The use of wordwall media in learning English vocabulary stuudents are more excited when the teacher conveys the material using the media and students are more active than before using wordwall media so that students can master vocabulary well.

5.1.1 Suggestion

For suggestions, the researcher would like to say that this research is a studies that uses wordwall media where thera have been many previous studies that show the wordwall media has an affect on students vocablary mastery so it will be very useful if wordall media can be used as learning media when in class.
